## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claims 1-2 and 7-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Artenian (U.S. Patent 5,265,805).

Artenian teaches a high pressure cleaning apparatus comprising a rotatable spray head (see Fig. 2 and 3), and diffusers (51) located one on each side of the cleaning head and the diffusers are solid deflector sheets (see Fig. 2).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 3-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Artenian.

Artenian has all the features of the invention but Artenian failed to teach the diffusers are approximately two inches from at least one side of the cleaning head and the diffusers are perforated sheets with perforations graduated in size. It would have

Art Unit: 3752

been obvious to one having ordinary skills in the art at the time the invention was made to have the diffusers are approximately two inches from at least one side of the cleaning head and the diffusers are perforated sheets with perforations graduated in size to improve the efficiency of the high pressure cleaning apparatus on a hard surface.

### ***Conclusion***

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Poppitz, Rohrbacher et al. ('354 and '967), Rocher, Halls et al., Goerss, Long and Fryoux are cited of general interest.
